Subject: Pulling address lists from the city web site for fund drive purposes

The city's web site now makes it possible for you to pull address lists simply by drawing borders on the map – and it's completely free.

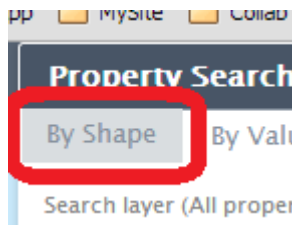

The name of this system is: **VBGOV GIS Property Map**

The web address for this system is: <https://gisapps.vbgov.com/psmap/>

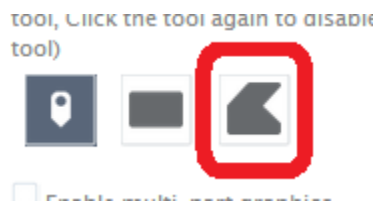

It looks like this:

If you click the "By Shape" tab...

Then click the "Polygon" button...

You can draw a polygon around an area. For this example, I've drawn borders around Oceana Naval Air Station:

When you're done, you "double-click", wait, and you get something like this:

The screenshot shows the Virginia Beach Property Map web application. The browser address bar displays <https://gisapps.vbgov.com/psmap/#>. The page title is "Property Map". The map shows a cluster of red circular markers on a street grid. The interface includes a search bar, navigation controls, and a data table at the bottom left.

Options: Filter by Map Extent Zoom to Clear Selection Refresh

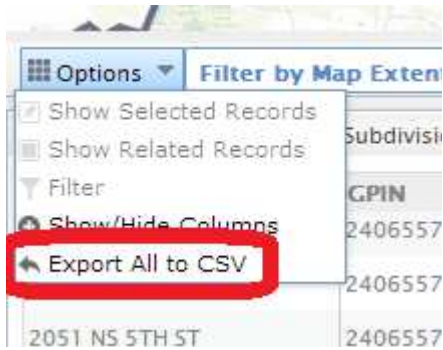

PROPERTY ADDRESS	GPIN	MAP_BOOK	MAP_PAGE	INSTRUMENT	SUBD
TOMCAT BLVD	2406557429000		0	0000000000000	GENER BOOTH
73 OCEANA BLVD	2406557429000		0	0000000000000	GENER BOOTH
400 NS B AVE	2406557429000		0	0000000000000	GENER BOOTH
600 NS 5TH ST	2406557429000		0	0000000000000	GENER BOOTH

223 features 0 selected

Notice that ***all*** the addresses in your polygon show up in a column near the bottom left. If you click the "Options" drop-down...

Then "Export All to CSV"...

You can download a CSV file that you can open in your spreadsheet program. You can also send the CSV file to me to be merged into your OscarTRACK/KEYclick database if you are using that system. In OscarTRACK/KEYclick, we can perform "trespass detection", and the results will be shared with the appropriate squads to facilitate a resolution prior to mailing.
